Adverse Cutaneous Drug Eruptions Chemical Immunology and Allergy, Vol. 97

Editor(s): French, L.E.;
XIV + 240 p., 43 fig., 30 in color, 34 tab.,
hard cover, 2012
Price : USD 233.00
ISBN: 978-3-8055-9970-2
e-ISBN: 978-3-8055-9971-9

An indispensable tool for understanding, diagnosing and managing this common clinical problem

The skin is one of the most frequently involved organs in adverse drug reactions. Occurring with an incidence of 1–5% for certain types of drugs, cutaneous drug eruptions are mostly benign in nature, and comprise the maculopapular type of eruption and urticaria. However, about one third of them require hospital treatment, leading to a considerable burden for the health care system. In this book, a selected group of experts provide an up-to-date, condensed and clinically relevant overview of the field of cutaneous drug eruptions, ranging from epidemiology and genetic predisposition to available therapeutic

measures, including rapid drug desensitization. Reflecting the great progress made in recent years in this field, this publication will be a useful tool for a better understanding, diagnosis and management of cutaneous drug eruptions, not only for general physicians, dermatologists and clinical allergologists, but also for nurses and scientists.
